

1. Wireframes:

- a. **Low Fidelity Wireframe:** This shows the leaderboard page of the carbon footprint based social media app. On this page you can view where you stand in the world, or against your friends depending on your carbon footprint. You can see the percentage and your name and the navigation bar on the bottom.

- b. **High Fidelity Wireframe:** This shows the profile picture, the name, the carbon footprint percentage that is generated by algorithms, pictures the user has posted and the navigation bar on the bottom. There are buttons to follow the user, or navigate through the navigation menu. You can also click on the images to view them such as in Instagram. When clicking on the carbon footprint percentage, it takes you to the leaderboard/friends page. The home page has a feed to scroll through friends posts and like and comment. The next tab has learning games where you can compete against friends. The next is where you can post your own pictures/videos. The next is to view the same leaderboard mentioned above.
